## Engineering F!rosh Riot Breaks Glass

A veritable sea of yellow and blue, with the occasional purple highlight, flooded the Ontario parliament buildings, as hundreds of University of Toronto Engineering students rallied in protest against raising fees. Over six hundred first year students, referred to as f!rosh, had gathered on campus that morning for orientation events. The f!rosh were lead by roughly one hundred-fifty upper classmates.

An eye-witness was found hiding in a dumpster. When questioned by a Toi\*KE reporter, the individual was reluctant to respond at first, but eventually the following conversation took place:

*witness*-"Are they gone?"

*reporter*-"Who?"

*witness*-"Those...engineers! They are so unprofessional!"

*reporter*-"Err... ya, they're gone. Can you tell me what happened here?"

*witness*-"Yes, I ... I think so. Those f!rosh leaders, they corrupted those fine students! First they taught them songs and cheers, then games! All they talked about was having fun at University, oh the thought of it

makes my mustache itch! Then they filled their heads with propaganda."

*reporter*-"What kind of propaganda?"

*witness*-"They told them that as students at U. of T. they should demand the best. That the faculty must work for *them*; for *their* education, because that's what *they* are paying for. What nonsense! It is misinformation like that that causes a rift between faculty and students."

*reporter*-"Err..., right. What?"

*witness*-"Then, that mob of thousands started yelling about over-inflated tuition. They broke my glasses as they rioted, chanting 'Can

Bob come out and play?' and '3000 bucks for tuition sucks!'. I tell you, next-year the faculty should run orientation altogether! There would be no ounce of pleasure mixed with this institution's business then!"

The tuition costs the angry students were protesting have been increasing steadily for the last decade, but this last increase has been called "an unprecedented jump" by one of the protesters. This year's fees for undergraduate engineering at U. of T. total \$3031.38 for returning students; \$3021.38 for first-years. Experts say that these figures will continue to grow 50% over the next four years.

One of the f!rosh at the rally, wishing to be known only as "Joey", commented that the event was "unreal". "Those NDP guys didn't have a clue what hit 'em", he said. When asked what the likely response of the government would be, he just shrugged. "They'll say we got OSAP, so quit whining. But most of the people getting OSAP don't need it, and those of us who do need it lose out."

Joey was reluctant to speak further, but he did become very angry at the suggestion of his own faculty taking action against the rioters. "Why would they? They are supposed to be on our side! You know, education first? We'd lose it totally if they turned on us now! Fuck that, no one would be that stupid!"

The actual results of the protests are as yet unclear. Students are hoping their message was received and no further education cuts will be made. The U. of T. Engineering Society has no comment at this time, and refuses to respond to charges that they intentionally started the riot.

**Circulation:**

The Toike Oike is a monthly publication (during the school year). Each issue has a circulation in the area of 12 000 copies throughout the University of Toronto community. Subscription information is available at the U of T Engineering Society, (416) 978-5377.

**Disclaimer:**

The Toike Oike is a humour newspaper designed to entertain and (mis)inform its readers. The opinions expressed within this newspaper are those of the authors, and do not necessarily represent those of the U of T Engineering Society, unless so indicated.

Questions, comments, articles and bomb threats may be forwarded to:

The Toike Oike  
c/o Editur-in-Chief  
10 King's College Rd.  
Sir Sandford Fleming Bldg.  
Rm B670  
M5S 1A1

# Editurd's Word:

I spent many nights of MY summer working hard on this issue. First of all I would like to thank all those who've also given up their free time to help out, it is appreciated as I understand the task of getting into Skule™ from outside of Metro. Secondly, those of you who didn't help out, we have a special section for any complaints that you might have. BUT, I and many of the staff members think that if you don't piss yourself laughing at least once while reading this issue, you are welcome to your money back!

For Toikes to follow,

all of you out there, even you Artsie types, are invited to submit articles, photographs and artwork. As a incentive there could be/may be/might be a party for those who contributed (whose name appears in the mast head) the first Friday after publication, where BEvERages will be consumed at the expence of the Toike Oike! That's the best kind of BEvERage too!

Anyway, the rest of this is just to fill the space... so keep reading only if you want to. Blah blah blah, blah, blah b-blah! Bah bla blah. Blah blah blah

zuchinni blah?

Oh, I almost forgot - I hope you're still reading - when you're handing stuff in, both hard copy AND a disk(ette) would be appreciated.

Blah b-b-b-blah baha ha ho Dog has no nose Bo blah ha terrible! ☹

Blah rutabaga blah Dean blah blah - blah. Ha haa hee ho hah!

Thanks and enjoy.

## Welcome Everybody!!!!!!!!!!!!!!

Hello and welcome to or welcome back to Skule™. Another year doing labs, problem sets, midterms, exams, design projects, presentations and thesis - boy isn't that something to look forward to. I'm trying not to think about it, as I sit here writing this article in one of the few weeks(days-Ed) left of the summer. So on a better note, just think of all the fun exciting things you can go to from Eng. Soc. and your Club - there are club dinners and trips, the Cannonball, Oktoberfest, conferences, and any road trips that may pop up! All these things will keep you busy for the year. For 4th years we have Gradball and Iron Ring, we still have a couple hundred or so days to go till iron ring - but I'm not counting or anything. What words of guidance would you like to hear from your

president? None?! Well too bad because I like to talk. Enjoy Skule™ as long as you have it because there's nothing worse than the REAL world.

I hope that you have had a relaxing summer because Skule™ is here, UGH! But along with Skule™ you get to see all your friends, make some new ones, some-one to play bridge or euchre with. While you're going to your first week or so of classes and finding which lec-tures you will be at-tending and who you will get class notes off of, make sure you come by the Atrium and sign up for some committees in Eng. Soc. and/or intra-mural sports. We have to make your Skule™-life lots and lots of fun, so get involved! If you don't like what we have to offer, come talk to me and maybe we can create an

event to your liking!

For F!rosh entering Skule™, best of luck to you! Make lots of friends and get upper years to give you their class notes - but watch out because some of your courses have changed. Isn't that annoying. For years one was able to get copies of problems sets, old midterms, old exams. old notes - but now everything has changed so that everything people have been saving up to give f!rosh is useless! However, some things will never change such as Calculus, except for the textbook.

Enough from me, have a good year. Come and see me in my yellow office. BYE!!

Sincerely Your PREZ.  
Ruby Nayyar IND 9T5

# Bitchin' and Whinin'

## (Letters to the Editurd)

Dear Toike Oike staff,  
at last I have found the time to write to you and express my gratefulness to you for being there. You have always been a breath of fresh air in a very stuffy university. There has never been an issue of yours that I did not laugh throughout. The Toike has never failed me in its mission to entertain and challenge the authority of every stuffed shirt on campus. There has been no better use for the freedom of

the press than by your witty writing and great art, especially those comics by Rioo (I think that is the signature, but it could be Rico). Even though I am in Celtic studies at St. Mikes, I still don't give a damn for any damn man who doesn't give a damn for you! Keep up the good work!

signed,

Josephine Squoolle

*Dear Joe,  
now that sounded fake, even to me! Was that just to get your name printed in the infamous Toike Oike? Did you have a bet? A dare? You kissed ass so much, I think I got a rash. Get a life. —Editurd*

To all this may concern:

I find it hard to believe that the Toike Oike still exists. All it has ever stood for as long as I can remember is filthy, sexist jokes and falsified

campus gossip. This paper that your Engineering student council is so proud of is a disgrace to U. of T., all with the LGMB, the BFC and your precious phallic-symbol cannon. I am glad to have nothing to do with your faculty, and would be even gladder if you all would grow up.

(unsigned)

*Dear mister "Too chicken to sign my name"-loser-guy,*

*If you took your head out of the sand (or*

*is it stuck in the Varshitty?) and took a good look at our beloved faculty, you would see that all your whining is out of date, by about fifteen years! Your name wouldn't happen to be followed by "Dean of" something or another, would it? The LGMB does more charity gigs than Cosby and what the hell is the BFC? As for phallic-symbols, I bet the CN Tower, with the SkyDome at its base, gives you nightmares, you sex-deprived loony!—Editurd*

## "Welcome back" from Dean Charles

I am pleased to offer a warm welcome to both returning and new students. While a good number of you have worked in research laboratories in the Faculty over the summer, most of you have been away from Skule™ either working elsewhere or traveling. A special "welcome back" to the over one hundred students who have participated in the PEY program over the past 16-months; I encourage you to enrich classroom discussions with your experience.

Whatever you've been doing over the summer, you are returning with fresh enthusiasm for your studies and the desire to complete another academic year towards your degree. September is that time of the year!

Superficially you will find the Faculty much as you left it. However, under the surface there is intense planning activity underway which will culminate in a "Strategic Plan" for the Faculty by the end of December. A good number of you are already involved and have met external review teams who are evaluating all our graduate and undergraduate programs. I appreciate your ready willingness to contribute to making the Faculty and its programs stronger.

There are three matters I

want to raise specifically and ask for your co-operation.

### 1. Security and Safety

The teaching and research laboratories within the Faculty, including computer facilities exist for your benefit and are there as a consequence of financial support from the governments of Ontario and Canada, alumni, and, of course, yourselves both through tuition fees and the special levy. Please respect all these facilities and, in particular, don't compromise security by leaving doors propped open when they should be locked shut. Providing opportunities for intruders to enter not only encourages damage and theft, but also jeopardizes personal safety.

### 2. Equity Issues

I want to remind you that Federal and Ontario law prohibits discrimination among individuals on the basis of gender, racial or ethnic origin, ancestry, creed or disability. In a large community such as Skule™ we have to consciously promote a sense of inclusion and mutual respect among all members regardless of gender, ethnic background or sexual orientation. Attitudes and behaviour may be ingrained but they can change. I encourage all of

you to show appropriate respect for your colleagues. In this way, we can build upon those personal qualities which make for fine students and citizens.

### 3. Computer Facilities

The computer facilities provided by the Faculty and its Departments are intended for academic purposes only. And feeds through Internet or other networks which are not directly supportive of your academic work are "off-limits" and have no place in the classroom or computing lab. The Director and staff of the Engineering Computing Facility are authorized to deny access to any students who abuse this policy. In this context I call your attention to the Notice of Offence elsewhere in this paper and recommend that you be familiar with all sections of the Code of Student Conduct.

The above three matters are important to us all in building a stronger sense of community within which the teaching and learning that we are all here to accomplish will take place in a positive and constructive environment.

Have a great year!

Michael E. Charles  
Dean

## NOTICE OF OFFENCE

On the recommendation of the Discipline Appeals Board, I am publishing the following Notice of Offence and the sanctions imposed:

Two students were charged with having contravened the following sections of the University of Toronto Code of Student Conduct:

**B 5 (a)** No person shall knowingly use any facility, equipment or service of the University of Toronto contrary to the expressed instruction of a person or persons authorized to give such instruction, or without just cause

**B 5 (b)** No person shall knowingly gain access to or use any University computing or internal or external communications facility to which legitimate authorization has not been granted. No person shall use such facility for any commercial, disruptive or unauthorized purpose.

**B 7** No person shall counsel, procure, conspire with or aid a person in the commission of an offence defined in the Code

Both students had helped to install and maintain an FSP service which was not an authorized use of the "ugspair" computer system within the Department of Electrical and Computer Engineering. In addition, both students knew that University computers should not be used to copy copyright protected software, and that they were not to use another person's account.

The Investigating Officer concluded that both students knew the FSP server was being used intentionally through Internet to upload and download software, some of which was copyrighted. Although neither student obtained personal financial gain, they permitted at least two computer systems within the University of Toronto to be used in an unauthorized manner and made it possible for others to obtain commercial software without the required payments to owners

Both students pleaded guilty to the charges. At the divisional hearing, the following sanctions were imposed:

1) A formal written reprimand to be placed in their files until they graduate; and

2) Suspension from the Faculty for the months of May and June 1994. Accordingly, the earliest date for receiving their Bachelor of Applied Science degree would be at the fall convocation.

Upon appeal of these sanctions, the Discipline Appeals Board saw no power in the Code of Student Conduct to impose the first sanction, and quashed it. The Board quashed the suspension for the months of May and June 1994, and replaced it with a denial of any service or activity to either of the students of the University of Toronto that would result in their acquiring a graduation diploma before July 1, 1994. This sanction was imposed pursuant to Section B 5 of the Code of Student Conduct.

The Board affirmed the Hearing Officer's decision to recommend publication of the nature of the offences and the sanctions in campus newspapers, with the students' names withheld.

# JOIKES

A man having a bad day has a few drinks in a bar. By the end of the night, he's completely hammered. He waddles up the stairs from the bar, staggers through the streets, and makes his way to a parking lot near his home. He finds a car to lean on and he spews. An old woman walking her cat comes by, and the cat comes right up to the man's feet. Suddenly, the man spews right on the cat so that it becomes totally plastered to the ground. The woman shockingly stares at the man. The man, confused, looks at the woman and replies, "What the hell did I eat tonight?"

These two rabbits are hauling ass through a field, a pack of hounds not far behind them. They're starting to get really frightened, the pack closing in on them.

The first rabbit looks at the second and says, "Hey, I got a plan. Let's stop and outnumber them!"

The second rabbit says, "Shut up and keep running, stupid. We're brothers."

A young boy was sitting on the sidewalk playing with a pile of shit. As he was slapping it around an Artsie came up to him and asked "What are you doing?"

"I'm making an Engineer!" the kid replied.

Upon hearing this the Artsie smiled and rushed away. He returned several minutes later with an Engineer and said "Tell this Engineer what you're doing".

"I'm making an Engineer" The boy answered.

"Why would you say something like that?" The Engineer asked.

"Because I don't have enough shit to make an Artsie".

• How many men does it take to change a roll of toilet paper?

No one knows!

• How many Engineers does it take to come up with a good punchline?

• How many EngSci's does it take to screw in a light bulb?

Six, but half of them drop out before they're done!

• How many Geo's does it take to screw in a light bulb?

Both!

• How many cockroaches does it take to lift DEVO?

## Only one more!

• How many cockroaches would you find in the meat(like) loaf at DEVO?

None. They puree them first!

• What happened when Cinderella went out on a date with Pinocchio?

She jumped on his head and began screaming, "tell the truth, tell a lie, tell the truth, tell a lie..."

## Top Ten Excuses Used to Get In to See the Dean of Engineering:

10. I'm his lover.
9. He's the father of my child.
8. He's got my *Where's Waldo* book.
7. I want to donate money.
6. I have a (water) gun.
5. I have a warrant.
4. I'm here to deliver the BNAD album he ordered.
- π. I mailed him the pin to this grenade and I need it back.
3. The Big Fat Cow (wink,wink,wink) has eaten the zucchini.
- e. I know nothing...
2. I want to get his autograph.
1. I am the Toike Editor.

## Top Ten Things Which Should Be Legalized Because They Are Less Harmful than Smoking or Drinking:

10. Speeding
9. Owning 15 dogs, 6 cats and an iguana.
8. BEvERage consumption in public places.
7. Arm dying
6. Admitting the LGMB into the Eaton Centre.
5. Expectorating on the Red Rocket.
4. Buy(ing) a BNAD album.
- π. Prostitution (with proper protection)
3. Streaking.
- e. Cradle robbing (Note: if fathers get involved, this could be more hazardous than smoking or drinking).
2. Cheating on exams.
1. "Proof reading" someone else's problem sets.

## Top Ten Reasons Why This Year's SAC Prez Won't Be Here in April

10. SAC Sucks!
9. Gareth Spanglett is an Artsie.
8. He'll resign after meeting the Engineers at Con Hall.
7. Flies south for the winter.
6. Just ask Walter!
5. The Toike has some pictures...
4. He'll be too busy listening to his BNAD album.
- π. Would YOU stick around???
3. He thinks he's a Power Ranger! (The green one) And is possessed by Rita Ripulsa!
- e. He didn't inhale... but he sure did sell a lot.
2. Tradition!
1. BFC - Need we say more!

# Chem's Too Good For Our Orientation!

By: Mike Cianchetti

Is this the end of an era? Will this be the last orientation? Does Chemical Engineering want to become a 'distinct society'?

Those are the questions that were put to individuals on campus to get a feel for the climate that has arisen since Chem tried to pull out of orientation. This is the response....

"Let the Chem Dept. do what ever the fuck they want, we are still going to have an amazing orientation!"

"Orientation is a purely voluntary event. It introduces Frosh from around the world and helps them meet new people - other Frosh and upperclassmen. And they have a great time, too!"

"That would really suck, most of my friends are in different disciplines who I met during orientation..... I think it would be wrong to segregate the Chems from every one else.... They would feel like outcasts when classes start and they would only know other Chems."

"The department just wants to have more control over their students. They don't want you to make friends, because then you might talk and communicate with others, work on problem sets together and help each other out. That wouldn't be right now - would it?"

"The Chems are fucked. They complain that last year the Frosh came to the departmental gatherings wet and freezing cold. What they fail to realize is they were the ones who scheduled the time and they were the ones that chose an air-conditioned room. Furthermore Eng. Soc. had already rectified this problem by moving the departmental gatherings to Thursday instead of the first day. Maybe they should try to ask questions before they jump to conclusions."

The Chemical Department wanted to run their own orientation because they think that ours (Eng Soc's) does not project the image of professionalism and actually degrades the students. Eng. Soc. convinced the Chems not to walk out, but to make this a trial year. This way the department can see what exactly happens during the week and realize that there have been changes in the last decade.

They have to realize that we are a model group compared to orientations that take place at other faculties and residences. We treat our first year students with more respect and try to advise them how to survive four years of hell. The Department should have looked at orientation as a whole not as separate events, then they might understand the effort and time people have put in to make this orientation work.

# Headline

The following was submitted as a personal profile by a college applicant. The author of this essay, Hugh Gallagher, now attends NYU.

## #3A. ESSAY QUESTION

In order for the admissions staff of our college to get to know you, the applicant, better, we ask that you answer the following question:

*Are there any significant experiences you have had, or accomplishments you have realized, that have helped to define you as a person?*

I am a dynamic figure, often seen scaling walls and crushing ice. I have been known to remodel train stations on my lunch breaks, making them more efficient in the area of heat retention. I translate ethnic slurs

for Cuban refugees, I write award-winning operas, I manage time efficiently. Occasionally, I tread water for three days in a row.

I woo women with my sensuous and godlike trombone playing, I can pilot bicycles up severe inclines with unflagging speed, and I cook Thirty-minute Brownies in twenty minutes. I am an expert in stucco, a veteran in love, and an outlaw in Peru.

Using only a hoe and a large glass of water, I once single-handedly defended a small village in the Amazon Basin from a horde of ferocious army ants. I play bluegrass cello, I was scouted by the Mets, I am the subject of numerous documentaries. When I'm bored, I build large suspension bridges in my yard. I enjoy urban hang gliding. On Wednesdays, after school, I repair electrical appliances free

of charge.

I am an abstract artist, a concrete analyst, and a ruthless bookie. Critics worldwide swoon over my original line of corduroy evening wear. I don't perspire. I am a private citizen, yet I receive fan mail. I have been caller number nine and have won the weekend passes. Last summer I toured New Jersey with a travelling centrifugal-force demonstration. I bat. 400. My deft floral arrangements have earned me fame in international botany circles.

Children trust me.

I can hurl tennis rackets at small moving objects with deadly accuracy. I once read Paradise Lost, Moby Dick, and David Copperfield in one day and still had time to refurbish an entire dining room that evening. I know the exact location of every food item in the supermarket. I have performed several covert

operations for the CIA.

I sleep once a week; when I do sleep, I sleep in a chair. While on vacation in Canada, I successfully negotiated with a group of terrorists who had seized a small bakery. The laws of physics do not apply to me.

I balance, I weave, I dodge, I frolic, and my bills are all paid. On weekends, to let off steam, I participate in full-contact origami. Years ago I discovered the meaning of life but forgot to write it down. I have made extraordinary four course meals using only a mouli and a toaster oven. I breed prizewinning clams. I have won bullfights in San Juan, cliff-diving competitions in Sri Lanka, and spelling bees at the Kremlin. I have played Hamlet. I have performed open-heart surgery, and I have spoken with Elvis. But I have not gone to college...

# New Courses For 1994-1995

## PHS111 Rappelling for Engineers

The physical education department is pleased to offer engineering students this course. The correct methods of rappelling off buildings are taught, with extensive on-campus training. This course is a co-requisite of BFC127.

## BFC127 Mouse Evasion

This course [which does not exist] is offered by the Faculty of Brute Force [which does not exist] and it deals with the more effective methods of evading campus police [mice]. This course is taught by Prof. Joe E. Skule [who does not belong to the BFC which does not exist]. This course is a co-requisite of PHS111.

## CHE357 Brewing

This lab is a core course for chemical engineers. The brewing of ales, lagers, malts, lights, dries, extras, genuines and specials are demonstrated. The lab features a loud stereo, several large fridges, munchies and large pint glasses stolen from the Sticky Wicket.

## IND112 Financial Management for Engineers

This course teaches financial management skills and is offered only to Engineering students. Emphasis is placed on Stereo Acquisition and Beer Funding. Effective methods of screwing the government for bigger OSAP loans are taught as well.

## ELE275 Stereo and Speaker Design

This course offers the opportunity for engineering students without OSAP [Ontario Stereo Acquisition Program] loans to build their own hi-fi system. Using 'acquired' components, students will design and build their systems, and test them at an end of year 'show us your stereo' SUDS.

## CSC154 ECF Hacking

This computer lab course teaches the intricacies of the engineering computing facilities. Topics include initiating system shutdown and coredump, hard drive reformatting, password detection, email disguising and picture viewing.

## BIO235

### Hangover Prevention

This biology course has just recently been opened to engineers. Methods of Hangover Prevention are taught, with an emphasis placed on the 'chin-up' maneuver where continued alcoholic consumption for prolonged periods delays the onset of hangover. There is an associated laboratory with this course.

## MUS132 BNAD Training for the Musically Inept

The Music department and most of the varsity teams are proud to offer engineering students the opportunity to learn to play an instrument in their first year. This course tests each student for any musical abilities and starts them on the instrument best suited for them. For those failing to find any musical talent, training in the art of pseudo-melodic white noise is available.
